

DIVISION OF DEVELOPMENTAL DISABILITIES
Olympia, Washington

TITLE:	CONSENT FOR MEDICAL TREATMENT AFFECTING REPRODUCTIVE FUNCTIONS	POLICY 9.08
--------	---	-------------

Authority: 42 CFR 440.150, 483.420
RCW 7.70.065
RCW 71A.20.050

BACKGROUND

Proper medical or surgical treatments for some diseases and/or health conditions cause sterility or reduced ability to produce children. Medical or surgical procedures that result in permanent sterilization require permission from a court to protect the individual's civil rights.

PURPOSE

This policy specifies the responsibilities of Division of Developmental Disabilities (DDD) staff to assist individuals in obtaining informed consent prior to treatment, and describes which treatments and procedures require court authorization.

SCOPE

This policy applies to all individuals with developmental disabilities served by DDD. This policy does not apply to emergency medical or surgical procedures necessary to save the person's life.

DEFINITIONS

Informed consent means consent given by a person to receive treatment with an understanding of the risks and benefits involved. If a person is not competent to give informed consent for health care, other persons as defined in [RCW 7.70.065](#) may provide informed consent on the individual's behalf.

POLICY

- A. DDD staff shall assist clients through the consent process before sterilization procedures are performed.

B. Intentional Sterilization Procedures

1. Individuals with developmental disabilities who are capable of providing informed consent may give consent for intentional sterilization procedures, such as tubal ligations and vasectomies.
2. A person's legal representative, family members, and/or other substitute decision-makers cannot give consent for intentional sterilization procedures.
3. Informed consent must be obtained thirty (30) days prior to any surgical procedure.
4. When treatment as described above has been prescribed for an individual, DDD staff will assist the person in completing and providing the necessary consent. If the person is not capable of providing informed consent, DDD staff will assist, in consultation with the Office of the Attorney General, the person's legal representative or family members to petition the Superior Court for consent.

C. Secondary Sterilization Procedures

1. Certain medical or surgical treatments and procedures necessary to save the person's life or to treat a condition, which if left untreated would become life-threatening, may result in secondary sterilization. This includes, but is not limited to:
 - a. Treatment for malignancy of the reproductive system, including breast cancer;
 - b. Treatment for disease of the reproductive system, which cures or prevents the spread of disease from the reproductive system, including ionizing radiation;
 - c. Treatment for benign lesions of the reproductive system; and
 - d. Treatment for trauma to the reproductive system.
2. A person's legal representatives can give consent for the procedures described above. If there is no legal representative, other family members may give consent according to the consent hierarchy defined in [RCW 7.70.065](#). When there is no legal representative or family member able to provide the necessary informed consent, DDD staff will, in consultation with the Office of the Attorney General, petition the Superior Court for consent.

D. Other Treatments Affecting Reproductive Functions

A person's legal representative can give consent for the following procedures:

1. Administration of contraceptive medications and contraceptive devices; and
2. Administration of medications prescribed for the purpose of diminishing sexual desire. In this case, an Exception to Policy (ETP) is required per [DDD Policy 5.15, Use of Restrictive Procedures](#).

E. Documenting the Need for Treatment

All medical or surgical treatments that result or may result in sterilization must be preceded by:

1. A specific medical diagnosis;
2. A description of:
 - a. The planned medical procedure;
 - b. Possible effects of the procedure;
 - c. Alternative treatments, including non-treatment; and
 - d. The risks and benefits of each treatment alternative.
3. Documentation of the medical necessity of the procedure by at least two (2) physicians. In addition, for females, at least one of the physicians must be a fellow of the American College of Obstetricians and Gynecologists (ACOG) or certified by the American Board of Obstetrics and Gynecology (ABOG); and
4. Documentation of necessary laboratory studies, including X-rays, CAT scans, ultrasound results, and any other examination results.

EXCEPTIONS

No exceptions to this policy are allowed.

SUPERSESSION

DDD Policy 9.08
Issued October 26, 1999
